## COLLAGEN REVITALIZING MIST

As we age, toxins in the environment, overexposure to the sun, poor nutrition, and even many skin care products damage our skin causing it to dry out, sag and get wrinkles.

### **Collagen Molecules**

Collagen is an abundant protein that resides beneath the epidermis, the top layer of our skin, and is responsible for keeping the skin tight and supple. Over time however, the collagen support system breaks down and our skin begins to show signs of aging. Replenishing the cells with collagen proves difficult because the collagen molecules are too large to pass through the protective layer of skin and into the cells.

### **Revolutionary Nano Collagen**

Sanaré is the first of its kind nano collagen molecules. Laser and ultrasound technology is used to fractionate the large collagen molecules into Nano-molecules. These molecules work through the skin to aid in moisture retention and help give the appearance of strong, healthy collagen, keeping the skin's healthy, youthful appearance.

Sanaré is a revolutionary  
Collagen facial treatment  
that rejuvenates, replenishes  
and helps reduce visible  
signs of aging.

# SANARÉ INGREDIENTS

**Collagen Type I, II, & III**  
Ability to reduce the appearance of fine lines and wrinkles.

**Colloidal Silver**  
Contains powerful anti-bacterial and anti-inflammatory properties and is excellent at improving the appearance of skin tissue damage.

**Colloidal Gold**  
Adds a radiant glow and helps tighten the look of the skin.

**Horsetail Extract**  
Contains the trace mineral silicon which helps improve skin texture and keeps the skin's youthful shape.

Sanaré is produced in the most advanced facility. Each production stage provides perfect quality controlled product to ensure its quality and consistency. Strictly complying with FDA, GMP, CGMP, CGLP, CGD and HACCP guidelines.
